

The Westside Green Sanctuary Committee would appreciate your visiting the Fort Worth Science Museum's Energy Blast exhibit by the end of April, 2011, and providing your brief observations on its efficacy. You might find our suggested guidelines (below) helpful, but just a few notes on paper or from your notebook, in any format, would be great. The museum is at 1600 Gendy Street, backing on Montgomery between West Lancaster and Harley. Phones are: 817-255-9300, 888-255-9300. Admission is \$14 for adults and \$10 for kids/seniors.

Before you go, recognize and write down any preconceptions you might have. This will help you to be more objective and to avoid including them as you observe the exhibit. Take along a small notebook, a pen, perhaps a camera. Describe Energy Blast and its impact on you. Then, as you have an opportunity, reflect on what you have seen and note any suggestions and questions.

Suggested Guidelines:

- Describe whether it met your expectations? Were all your questions answered?
- Describe its best and worst aspects. Is the title of the exhibit appropriate? Why?
- Were any negatives or dangers mentioned? How can the exhibit be improved?

- What is the relationship of natural gas producers/ donors to this exhibit?
- What is their impact? Do they introduce a bias? Is this appropriate in this setting?
- How does the exhibit inform you of this relationship?
- How might corporate donors best be acknowledged in the Museum's science exhibits?

When you have finished your written observations, please leave them in the Green Sanctuary Committee's mail slot in the church office, or hand them to Linda Hanratty, Linda Jenkins, Bob Vann, or another member of the committee.

What I Saw at Energy Blast
